

Introduction to ArchiCad

State ID: A1011P

About this course

Description

The course is a level 1 introduction to Archicad, a building modeller used extensively for architectural design and documentation in a 2D and 3D environment. As far as possible, the course is delivered to match individual participant's aspirations and real life applications.

Suitable For

Delivery will suit those wishing to learn Computer Aided Design skills in order to improve productivity and career opportunities. Previous participants who found the course worthwhile include landscapers, builders, trades people, building and interior designers, fabricators, owner builders, and planners. It is also a good way to ascertain if an associated qualification is worthwhile pursuing.

Topics Covered

- Introduction to CAD and how it's used for wide range of architectural and engineering projects
- Basic 2D drafting and getting to know how the program works
- Using the program to produce a 3D model – walls, slabs, doors and windows, roofs, terrain
- Getting the model on to paper – elevations, sections and plan views
- Adding dimensions and text to complete a working drawing
- Creating realistic 3D images using different building materials
